# Invoice:

## 1st TN Free State Depository & Exchange

12 June 2024

### OVERVIEW

This invoice is for the purchase of a custom-built proprietary Military grade infrastructure, developed by scouring the available technology made available through personal contacts in Defence Contracting from across the world. Providing a scalable robust hardware/software system that is capable of handling an endless supply of data through hardened node stations connected through fiber. To handle Bullion, Coin, and other physical assets using an encrypted digital two-factor authentication system along with a physical accounting which assigns generated customer ledger numbers and deposit receipts that can be used for exchange allowing for continual asset protection.

This system is designed to engage with other financial associations and the QFS/Blockchain giving customers access to the global marketplace. It is also capable of handling the tokenization of assets for commodities exchange and barter. There are additional modules available to adapt to a variety of growing customer needs, such as chat, email, and web commerce.
